REV361 14-Nov-2021

OS212[4]): Operating Systems 2021 - 2

OS A	OS B	OS C	OS INT
Every first day of the Week, **Quiz#1:** (07:40-07:50) and **Quiz#2:** 07:20-07:40			
Monday/Thursday 13:00 — 14:40 14:00 — finish	Monday/Thursday 15:00 — 16:40[1] 16:00 — finish	Monday/Thursday 13:00 — 14:40 13:00 — 14:40	Monday/Wednesday 08:00 — 09:40 09:00 — finish

Week	**Schedule & Deadline[2])**	**Topic**	**OSC10[3])**
Week 00	30 Aug - 05 Sep 2021	Overview 1, Virtualization & Scripting	Ch. 1, 2, 18.
Week 01	06 Sep - 12 Sep 2021	Overview 2, Virtualization & Scripting	Ch. 1, 2, 18.
Week 02	13 Sep - 19 Sep 2021	Security, Protection, Privacy, & C-language.	Ch. 16, 17.
Week 03	20 Sep - 26 Sep 2021	File System & FUSE	Ch. 13, 14, 15.
Week 04	27 Sep - 03 Oct 2021	Addressing, Shared Lib, & Pointer	Ch. 9.
Week 05	04 Oct - 10 Oct 2021	Virtual Memory	Ch. 10.
Week 06	11 Oct - 31 Oct 2021	Concurrency: Processes & Threads	Ch. 3, 4.
Week 07	01 Nov - 07 Nov 2021	Synchronization & Deadlock	Ch. 6, 7, 8.
Week 08	08 Nov - 14 Nov 2021	Scheduling + W06/W07	Ch. 5.
Week 09	15 Nov - 21 Nov 2021	Storage, Firmware, Bootloader, & Systemd	Ch. 11.
Week 10	22 Nov - 28 Nov 2021	I/O & Programming	Ch. 12.

[1]) **OS B:** Week00-Week05 (RMS); Week06-Week10 (MAM).

[2]) The **DEADLINE** of Week 00 is 05 Sep 2021, whereas the **DEADLINE** of Week 01 is 12 Sep 2021, and so on...

[3]) Silberschatz et. al.: **Operating System Concepts**, 10^{th} Edition, 2018.

[4]) This information will be on **EVERY** page two (2) of this course material.

Agenda I

Agenda II

Week 06 Concurrency: Topics[1]

- States and state diagrams
- Structures (ready list, process control blocks, and so forth)
- Dispatching and context switching
- The role of interrupts
- Managing atomic access to OS objects
- Implementing synchronization primitives
- Multiprocessor issues (spin-locks, reentrancy)

[1] Source: ACM IEEE CS Curricula 2013

Week 06 Concurrency: Learning Outcomes (1)[1]

- Describe the need for concurrency within the framework of an operating system. [Familiarity]
- Demonstrate the potential run-time problems arising from the concurrent operation of many separate tasks. [Usage]
- Summarize the range of mechanisms that can be employed at the operating system level to realize concurrent systems and describe the benefits of each. [Familiarity]
- Explain the different states that a task may pass through and the data structures needed to support the management of many tasks. [Familiarity]

[1] Source: ACM IEEE CS Curricula 2013

Week 06 Concurrency: Learning Outcomes (2)[1]

- Summarize techniques for achieving synchronization in an operating system (e.g., describe how to implement a semaphore using OS primitives). [Familiarity]
- Describe reasons for using interrupts, dispatching, and context switching to support concurrency in an operating system. [Familiarity]
- Create state and transition diagrams for simple problem domains. [Usage]

[1] Source: ACM IEEE CS Curricula 2013

Week 06: Concurrency: Processes & Threads

- Reference: (OSC10-ch03 OSC10-ch04 demo-w06)
- Process Concept
  - Program (passive) $\leftrightarrow$ Process (active)
  - Process in Memory: | *Stack* $\cdots$ *Heap* | *Data* | *Text* |
  - Process State: | *running* | *waiting* | *ready* |
  - Process Control Block (PCB)
    - `/proc/`, Process State, Program Counter, Registers, Management Information.
- Process Creation
  - PID: Process Identifier (uniq)
  - The Parent Process forms a tree of Children Processes
  - `fork()`, new process system call (clone)
  - `execlp()`, replaces the clone with a new program.
- Process Termination
  - `wait()`, until the child process is terminated.
- PCB (Context) Switch

Process Map (1)

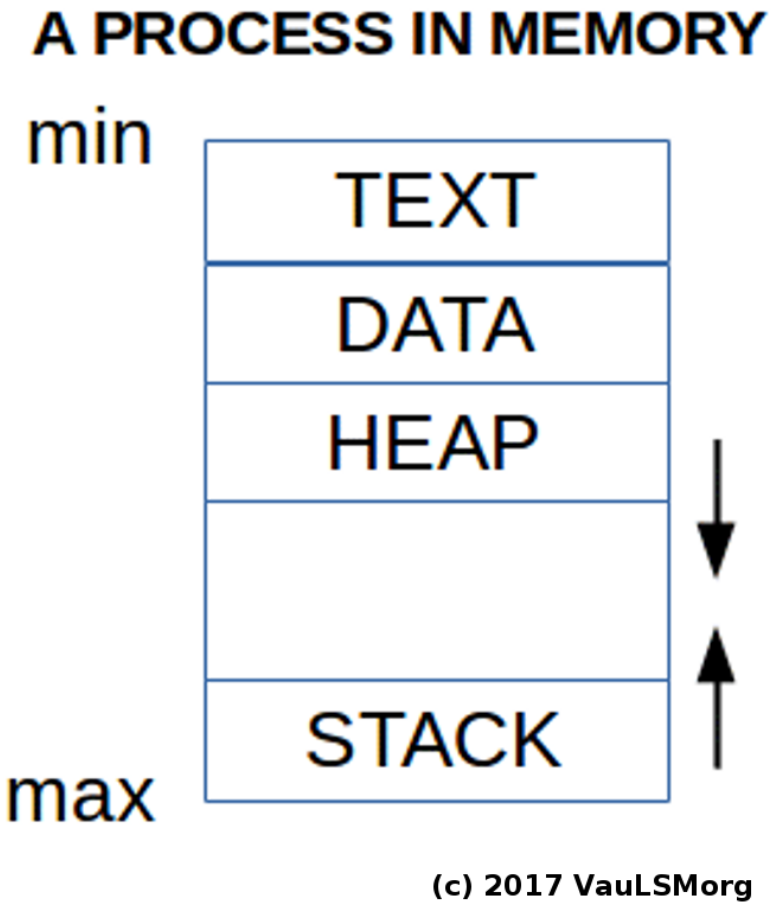

Figure: A Process in (**logical**) Memory

Process Map (2)

```
/*
 * Copyright (C) 2021 Rahmat M. Samik-Ibrahim
 * START: Sat 03 Apr 2021 06:20:43 WIB
 */

#include <stdio.h>
#include <stdlib.h>

typedef void* AnyAddrPtr;
typedef char* ChrPtr;
typedef char  Chr;

Chr    aGlobalArray[16];
ChrPtr aGlobalCharacter1;
ChrPtr aGlobalCharacter2;
ChrPtr aGlobalCharacterPointer=aGlobalArray;

void printMyAddress (AnyAddrPtr address, ChrPtr message) {
    printf("[%p] %s\n", address, message);
}

int main(void) {
    ChrPtr aHeapCharacterPointer=malloc(16);
    Chr    aLocalArray[16];
    ChrPtr aLocalCharacterPointer=aGlobalArray;
    ChrPtr aLocalCharacter1;
    ChrPtr aLocalCharacter2;

    // ...
}
```

Process Map (3)

```
[0x55559fcf9169] printMyAddress           (function, TEXT)
[0x55559fcf919c] main                     (function, TEXT)

[0x55559fcfc010] aGlobalCharacterPointer (global variable, DATA)
[0x55559fcfc030] aGlobalCharacter1       (global variable, DATA)
[0x55559fcfc040] aGlobalArray            (global variable, DATA)
[0x55559fcfc050] aGlobalCharacter2       (global variable, DATA)

[0x5555a0d192a0] aHeapCharacterPointer   (HEAP)

[0x7f9377bc9e10] printf                  (library, SHARED)
[0x7f9377c02260] malloc                  (library, SHARED)

[0x7fff8caa0010] aHeapCharacterPointer   (Pointer Variable, STACK)
[0x7ffd98ce1a10] aLocalCharacterPointer  (local variable, STACK)
[0x7ffd98ce1a18] aLocalCharacter1        (local variable, STACK)
[0x7ffd98ce1a20] aLocalCharacter2        (local variable, STACK)
[0x7ffd98ce1a30] aLocalArray             (local variable, STACK)
```

Process State

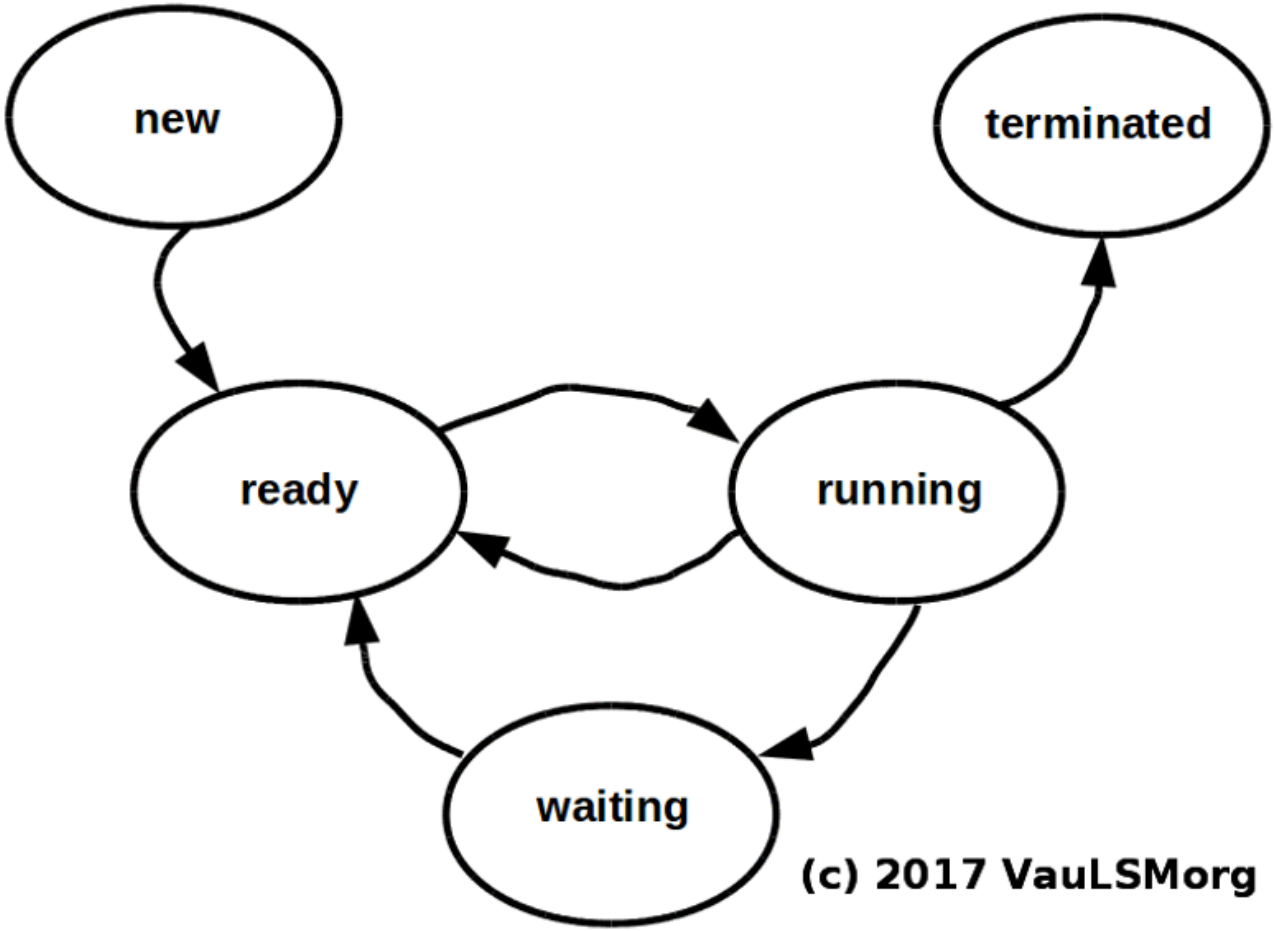

Figure: A Process State

Process Scheduling

- Scheduling Queue
- Schedulers
  - Long Term (non VM) vs Short Term (CPU)
  - (I/O vs CPU) Bound Processes
- Context Switch
- I/O Queue Scheduling
- Android Systems
  - Dalvik VM Performance Problem: Replaced with ART (Android Runtime).
  - Foreground Processes: with an User Interface (UI) for Videos, Images, Sounds, Texts, etc.
  - Background Processes: with a service with no UI and small memory footprint.

Inter-Process Communication (IPC)

- Independent vs Cooperating Processes.
  - Cooperation: Information Sharing, Computational Speedup, Modularity, Convenience.
- Shared Memory vs Message Passing.
  - Message Passing: Direct vs Indirect Comunication
- Client-Server Systems
  - Sockets
  - RPC: Remote Procedure Calls
  - Pipes

Threads

- Single vs Multithreaded Process
  - MultiT Benefits: Responsiveness, Resource Sharing, Economy, Scalability
- Multicore Programming
  - Concurrency vs. Parallelism
- Multithreading Models (Kernel vs User Thread)
  - Many to One
  - One to One
  - Many to Many
  - Multilevel Models
- Threading Issues
  - Parallelism on a multi-core system.
- Pthreads

Makefile

```
CC='gcc'
CFLAGS='-std=c99'

P00=00-show-pid
...
P15=15-uas171

Week 06: Check List (Deadline: 31 Oct 2021).

- Week 06: Assignment (**os06.pdf**). (Eg. **cbkadal**).
  - Visit https://osp4diss.vlsm.org/#idx0706
    1. Read OSC10 chapter 3 and 4
    2. Try Demos in https://github.com/UI-FASILKOM-OS/SistemOperasi/tree/master/Demos/.
    3. Try Previous FinalTerm Problems (https://rms46.vlsm.org/2/201.pdf).
    4. Fork() and Shared Memory.
       (a) Fetch and Extract File WEEK06.tar.bz2.asc.
       (b) Run script "000-README.txt." (See Week 04).
       (c) Observe how processes share variables.
       (d) Copy the result: `WEEK06-FORK.txt and WEEK06-SHARE.bin` (See Week 04).
    5. Update your bookmark links. See C.B. Kadal's "LINKS/".
    6. (Optional) Any suggestions/tips for the next semester class? See C.B. Kadal's "TIPS/".
    7. Review your peer links.
    8. Update your log. See C.B. Kadal's "mylog.txt"
    9. Submit your Week 06 Assignment (See Week 03).

The End
