REV359 30-Oct-2021

# OS212<sup>4</sup>): Operating Systems 2021 - 2

OS A	OS B	OS C	OS INT
Every first day of the Week, <b>Quiz#1:</b> (07:40-07:50) and <b>Quiz#2:</b> 07:20-07:40			
Monday/Thursday 13:00 — 14:40 14:00 — finish	Monday/Thursday 15:00 — 16:40 <sup>1</sup> 16:00 — finish	Monday/Thursday 13:00 — 14:40 13:00 — 14:40	Monday/Wednesday 08:00 — 09:40 09:00 — finish

Week	Schedule & Deadline <sup>2)</sup>	Topic	OSC10 <sup>3)</sup>
Week 00	30 Aug - 05 Sep 2021	Overview 1, Virtualization & Scripting	Ch. 1, 2, 18.
Week 01	06 Sep - 12 Sep 2021	Overview 2, Virtualization & Scripting	Ch. 1, 2, 18.
Week 02	13 Sep - 19 Sep 2021	Security, Protection, Privacy, & C-language.	Ch. 16, 17.
Week 03	20 Sep - 26 Sep 2021	File System & FUSE	Ch. 13, 14, 15.
Week 04	27 Sep - 03 Oct 2021	Addressing, Shared Lib, & Pointer	Ch. 9.
Week 05	04 Oct - 10 Oct 2021	Virtual Memory	Ch. 10.
Week 06	11 Oct - 31 Oct 2021	Concurrency: Processes & Threads	Ch. 3, 4.
Week 07	01 Nov - 07 Nov 2021	Synchronization & Deadlock	Ch. 6, 7, 8.
Week 08	08 Nov - 14 Nov 2021	Scheduling + W06/W07	Ch. 5.
Week 09	15 Nov - 21 Nov 2021	Storage, Firmware, Bootloader, & Systemd	Ch. 11.
Week 10	22 Nov - 28 Nov 2021	I/O & Programming	Ch. 12.

<sup>1)</sup> **OS B:** Week00-Week05 (RMS); Week06-Week10 (MAM).

<sup>2)</sup> The **DEADLINE** of Week 00 is 05 Sep 2021, whereas the **DEADLINE** of Week 01 is 12 Sep 2021, and so on...

# Agenda I

- 1 Start
- 2 Schedule
- 3 Agenda
- 4 Week 06
- 5 Week 06
- 6 Process Map
- 7 Process State
- 8 Makefile
- 9 00-show-pid
- 10 01-fork
- 11 02-fork
- 12 03-fork
- 13 01-fork vs 02-fork vs 03-fork
- 14 04-sleep
- 15 05-fork
- 16 06-fork

# Agenda II

- 17 07-execlp
- 18 08-fork
- 19 09-fork
- 20 10-fork
- 21 11-fork
- 22 12-fork
- 23 13-uas161
- 24 14-uas162
- 25 15-uas171
- 26 16-uas172
- 27 Assignment Week06
- 28 Week 06: Check List
- 29 The End

# Week 06 Concurrency: Topics<sup>1</sup>

- States and state diagrams
- Structures (ready list, process control blocks, and so forth)
- Dispatching and context switching
- The role of interrupts
- Managing atomic access to OS objects
- Implementing synchronization primitives
- Multiprocessor issues (spin-locks, reentrancy)

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

## Week 06 Concurrency: Learning Outcomes (1)<sup>1</sup>

- Describe the need for concurrency within the framework of an operating system. [Familiarity]
- Demonstrate the potential run-time problems arising from the concurrent operation of many separate tasks. [Usage]
- Summarize the range of mechanisms that can be employed at the operating system level to realize concurrent systems and describe the benefits of each. [Familiarity]
- Explain the different states that a task may pass through and the data structures needed to support the management of many tasks. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

## Week 06 Concurrency: Learning Outcomes (2)<sup>1</sup>

- Summarize techniques for achieving synchronization in an operating system (e.g., describe how to implement a semaphore using OS primitives). [Familiarity]
- Describe reasons for using interrupts, dispatching, and context switching to support concurrency in an operating system. [Familiarity]
- Create state and transition diagrams for simple problem domains. [Usage]

---

# Week 06: Concurrency: Processes & Threads

- Reference: (OSC10-ch03 OSC10-ch04 demo-w06)
- Process Concept
  - Program (passive)  $\leftrightarrow$  Process (active)
  - Process in Memory: | *Stack*  $\cdots$  *Heap* | *Data* | *Text* |
  - Process State: | *running* | *waiting* | *ready* |
  - Process Control Block (PCB)
    - /proc/, Process State, Program Counter, Registers, Management Information.
- Process Creation
  - PID: Process Identifier (uniq)
  - The Parent Process forms a tree of Children Processes
  - `fork()`, new process system call (clone)
  - `exec1p()`, replaces the clone with a new program.
- Process Termination
  - `wait()`, until the child process is terminated.
- PCB (Context) Switch

# Process Map (1)

(c) 2017 VauLSMorg

Figure: A Process in (**logical**) Memory

# Process Map (2)

```

[0x7ffd98ce1a18]	aLocalCharacter1	(local variable, STACK)
[0x7ffd98ce1a20]	aLocalCharacter2	(local variable, STACK)
[0x7ffd98ce1a30]	aLocalArray	(local variable, STACK)

# Process State

Figure: A Process State

# Process Scheduling

- Scheduling Queue
- Schedulers
  - Long Term (non VM) vs Short Term (CPU)
  - (I/O vs CPU) Bound Processes
- Context Switch
- I/O Queue Scheduling
- Android Systems
  - Dalvik VM Performance Problem: Replaced with ART (Android Runtime).
  - Foreground Processes: with an User Interface (UI) for Videos, Images, Sounds, Texts, etc.
  - Background Processes: with a service with no UI and small memory footprint.

# Inter-Process Communication (IPC)

- Independent vs Cooperating Processes.
  - Cooperation: Information Sharing, Computational Speedup, Modularity, Convenience.
- Shared Memory vs Message Passing.
  - Message Passing: Direct vs Indirect Communication
- Client-Server Systems
  - Sockets
  - RPC: Remote Procedure Calls
  - Pipes

- Single vs Multithreaded Process
  - MultiT Benefits: Responsiveness, Resource Sharing, Economy, Scalability
- Multicore Programming
  - Concurrency vs. Parallelism
- Multithreading Models (Kernel vs User Thread)
  - Many to One
  - One to One
  - Many to Many
  - Multilevel Models
- Threading Issues
  - Parallelism on a multi-core system.
- Pthreads

# Makefile

# Week 06: Check List (Deadline: 31 Oct 2021).

## □ Week 06: Assignment ([os06.pdf](#)). (Eg. **cbkadal**).

- Visit <https://osp4diss.vlsm.org/#idx0706>
  - ① Read OSC10 chapter 3 and 4
  - ② Try Demos in <https://github.com/UI-FASILKOM-OS/SistemOperasi/tree/master/Demos/>.
  - ③ Try Previous MidTem Problems (<https://rms46.vlsm.org/2/200.pdf>).
  - ④ Fork() and Shared Memory.
    - (a) Fetch and Extract File WEEK06.tar.bz2.asc.
    - (b) Run script "000-README.txt." (See Week 04).
    - (c) Observe how processes share variables.
    - (d) Copy the result: WEEK06-FORK.txt and WEEK06-SHARE.bin (See Week 04).
  - ⑤ Update your bookmark links. See C.B. Kadal's "LINKS/".
  - ⑥ (Optional) Any suggestions/tips for the next semester class? See C.B. Kadal's "TIPS/".
  - ⑦ Review your peer links.
  - ⑧ Update your log. See C.B. Kadal's "mylog.txt"
  - ⑨ Submit your Week 06 Assignment (See Week 03).

# The End

- ☐ This is the end of the presentation.
- ☒ This is the end of the presentation.
